Black Lake Special District  
Statement of Operations

Herbicide planning and application. Herbicides are applied to less than 2% of the lake surface area each year.

Reviewing and approving invoices for the district as needed

Submitting annual reports to Ecology regarding chemicals, quantities and acres covered

Submitting water quality improvement plans to Public Works to maintain storm water rate reductions

Development of annual budget

Adjust charges and assessments to parcels as necessary each year to meet obligations

Preparation and submission of charges and special assessments file to Treasurer each year

Follow up with Environmental Health on three streams found to have septic effluent

Monitor lake levels and alert Public Works when beaver activity is suspected

Monitor streams and alert Public Works when turbidity is high

Sample streams entering the lake every three years for elevated levels of nutrients/pollutants.  
Determine likely sources and corrective actions where levels are elevated.
